

Climatological Ice Atlas for the western and southern Baltic Sea (1961 – 2010)

Digital supplement: Comparison of ice conditions in the 30-year periods 1961 – 1990, 1971 – 2000 and 1981 – 2010

Abstract

The Ice Atlas presents a compilation of the results of a statistical evaluation of ice data from the Baltic Sea region south of 56° N covering the period 1961 – 2010 (50 years). Data from the offshore waters and from fourteen selected ice observation stations located along the southern Baltic Sea coastline have been included in the analysis. Additionally, the ice parameters from three 30-year periods (1961 – 1990, 1970 – 2000, 1981 – 2010) have been analysed and compared with each other. Here, too, data are available from offshore waters and from the fourteen ice observation stations referred to above. The results in the form of charts and tables are available on the enclosed CD.
