# UNIDART

## Uniform Data Request Interface

**Jürgen Seib**

Deutscher Wetterdienst

e-mail: [juergen.seib@dwd.de](mailto:juergen.seib@dwd.de)

Two additional slides added by Michael Lautenschlager  
(WDCC / M&D/MPI-M)

## General Project Information

- UNIDART is a EUMETNET Programme and DWD is the Responsible Member
- UKMO and KNMI are initial project partners
- start in 2001 with a feasibility study
- start of prototype development in 2003
- prototype software is installed at DWD, met.no, FMI and KMA
- installation planned at KNMI, MeteoSwiss, ZAMG and JMA
- test version of this software can be downloaded from UNIDART web site <http://www.unidart.eu> (see folder “Software & Tools”)

## The main goal of UNIDART

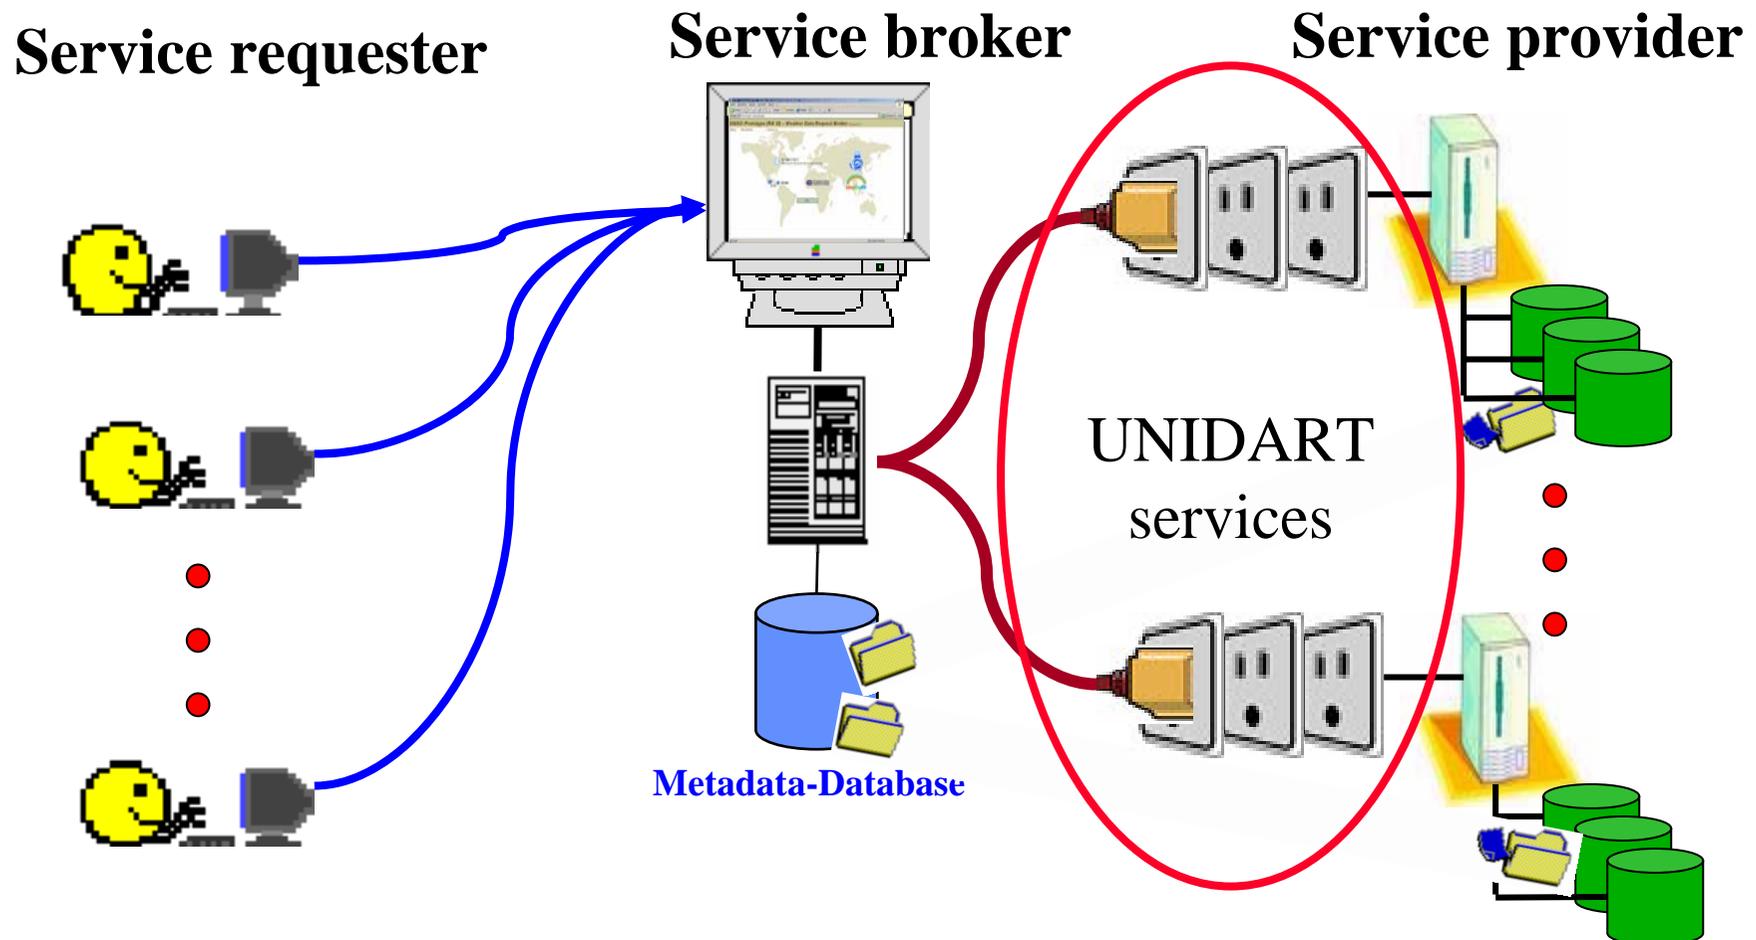

Development of a Web-based information system that allows a **uniform and integrated access** to **heterogeneous and distributed data sources** which store **any kind of meteorological data and products**

## 4 Steps to reach the Goal

- define data categories, e.g. climate time series, forecasts, satellite data, etc.
- develop a query syntax for each data category
- specify metadata templates to describe data sets of each data category
- write a web service for each data category

## Usage Scenario

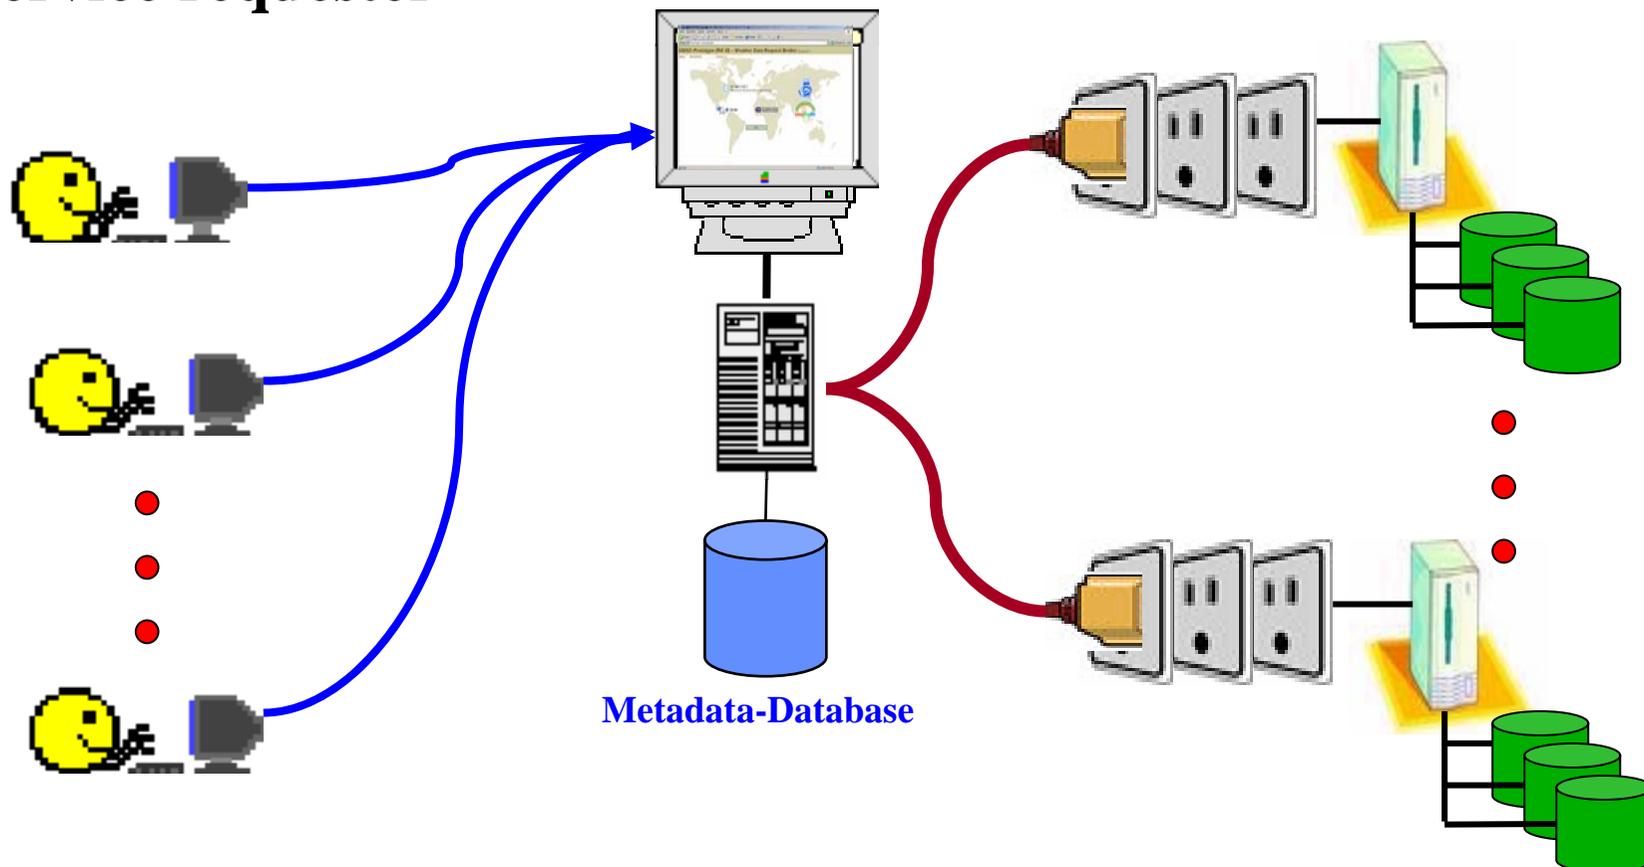

## Relationship to WIS

Service requester

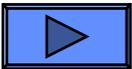

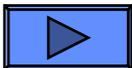

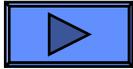

GISC portal

DCPCs and NCs

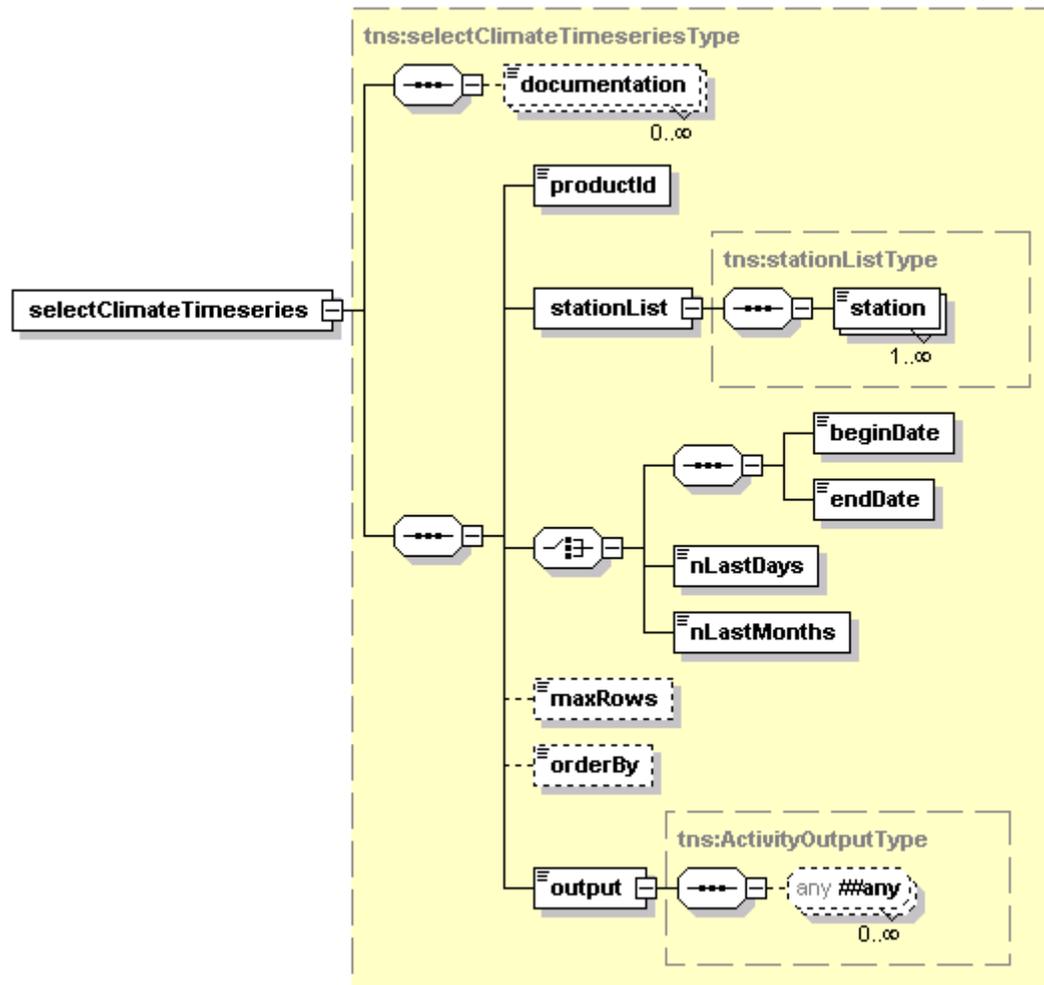

## 4 Steps to reach the Goal

- define data categories, e.g. climate time series, forecasts, satellite data, etc.
- develop a query syntax for each data category 
- specify metadata templates to describe data sets of each data category 
- write a web service for each data category 

## Query Syntax for Climate Timeseries

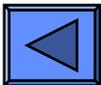

## A sample request document

```
<?xml version="1.0" encoding="UTF-8"?>
<perform xmlns="http://ogsadai.org.uk/namespaces/2005/10/types">

  <selectClimateTimeseries name="query">
    <productId>de.dwd.klis.TADM</productId>
    <stationList>
      <station>3</station>
      <station>102</station>
    </stationList>
    <nLastDays>10</nLastDays>
    <orderBy>stationname</orderBy>
    <output name="resultOfQuery"/>
  </selectClimateTimeseries>

  <sqlTimeseriesToXML name="output">
    <sqlTimeseries from="resultOfQuery">
      <xmlTimeseries name="XMLresult">
    </sqlTimeseriesToXML>

</perform>
```

</MD_Metadata>
```

## Creation of metadata

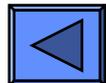

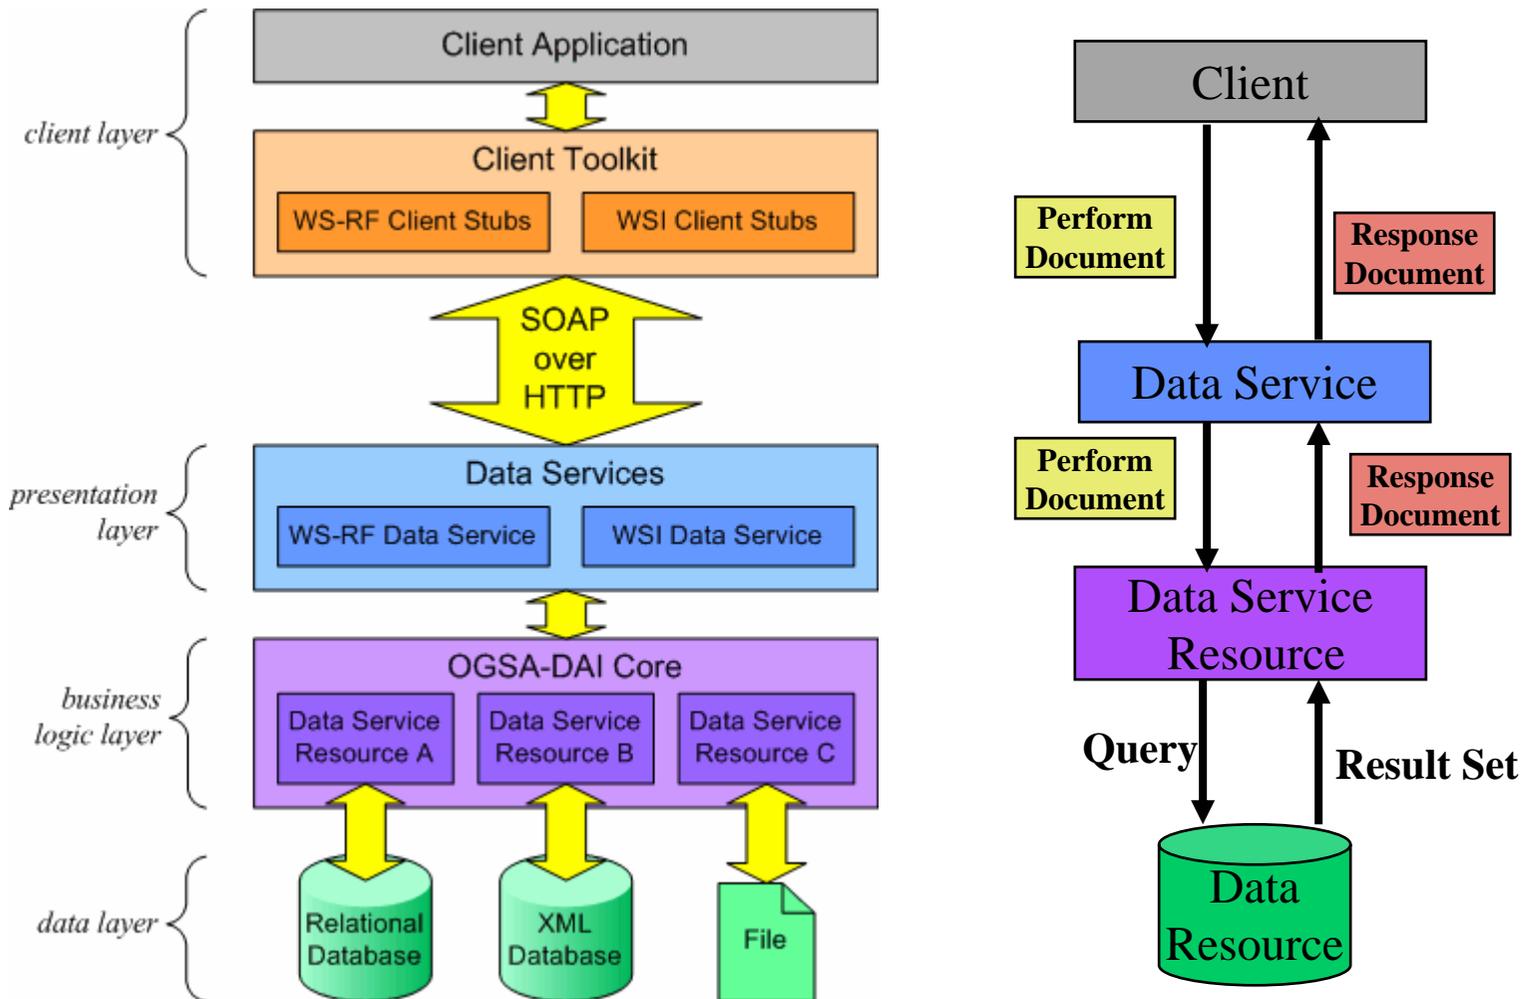

## UNIDART Service

- create an OGSA-DAI activity for each data category
- an activity is performed by an OGSA-DAI data service resource
- main problem: heterogeneity of the data sources
- product definition table: contains a parameterised SQL query for each product

## Architecture of OGSA-DAI

## SQL statements

- **bind variables**

- For the time range: `:beginDate` and `:endDate`
- For list of station-IDs: `:stationIdList`

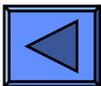

- **output variables**

- `stationname` name of the station
- `date` YYYY-MM-DD
- `quality` „very high“, „high“, „low“, „unknown“, „flagged“
- `latitude` degree N, decimal
- `longitude` degree E, decimal
- `altitude` in meter
- `value` according to the selected product

## Product Definition Table

PID	description	definition
de.dwd.klis.FBDM	daily mean of wind force	<code>select stationname, date, quality, latitude, longitude, altitude, windforce from stationen, wind_table where (stationid in :stationIdList) and .....</code>
de.dwd.klis.FFDX	daily maximum of windspeed	<code>select stationname, date, quality, latitude, longitude, altitude, windspeed from stationen, wind_table where (stationid in :stationIdList) and .....</code>
de.dwd.klis.TAMM	monthly mean of air temperature	<code>select stationname, date, quality, latitude, longitude, altitude, temperature_mean from stationen, temperature_table where (stationid in :stationIdList) and .....</code>
.....		

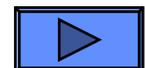

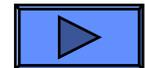

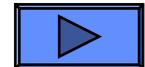

## Data Policy

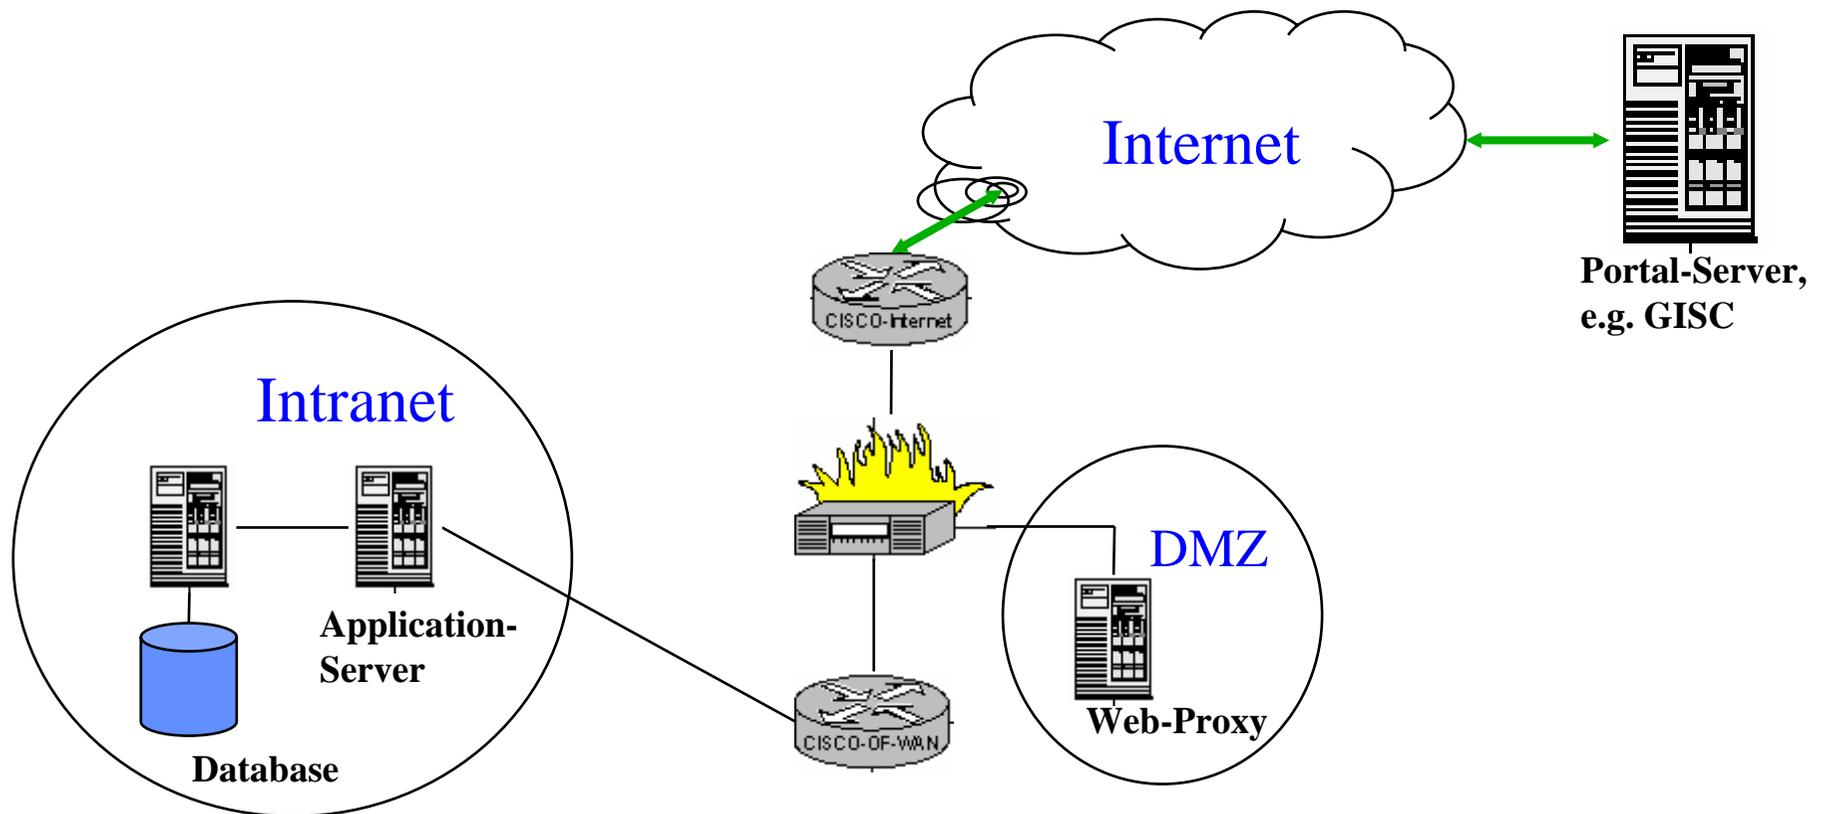

**A data provider decides :**

- from which machines data requests are accepted
- which users will be authorised
- which data sets are offered for download

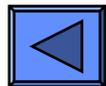

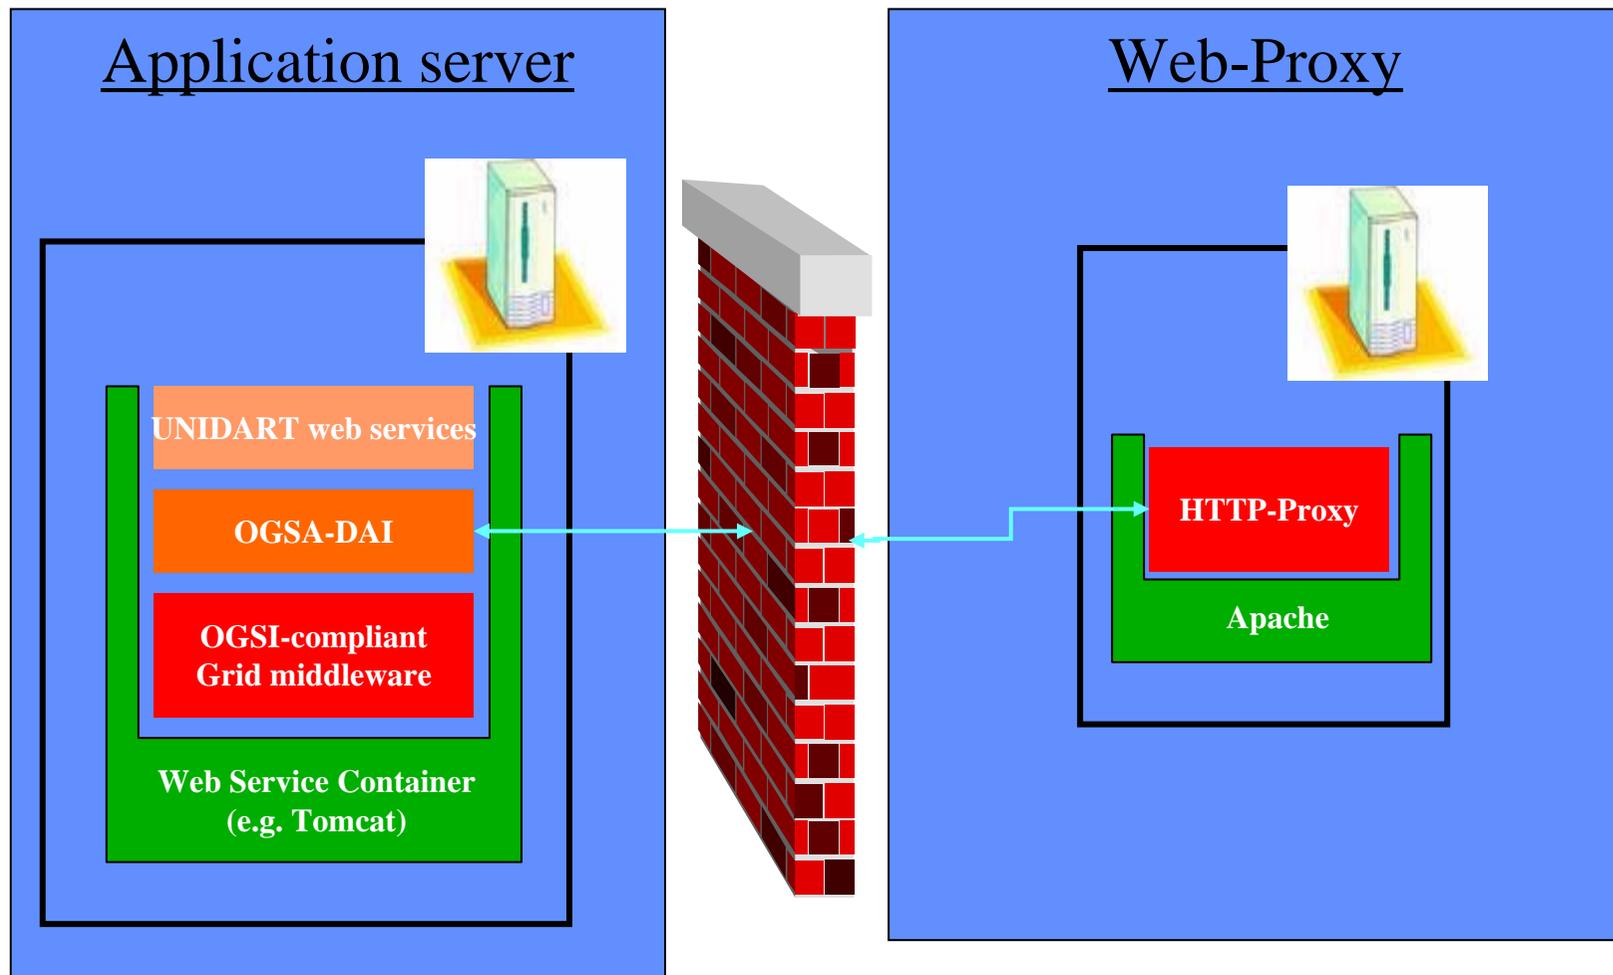

**The access to data is controlled by the provider !**

## Architecture

## Application Server

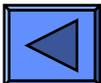

## Mapping certificates to database users

```
<?xml version="1.0" encoding="UTF-8"?>
<DatabaseRoles>

  <Database name="jdbc:oracle:thin:@oraserver.dwd.de:1521:DBASE1">
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=DWD"
      userid = "unidart_dwd" password = "*****" />
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=FMI"
      userid = "unidart_fmi" password = "*****" />
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=KNMI"
      userid = "unidart_knmi" password = "*****" />
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=met.no"
      userid = "unidart_met.no" password = "*****" />
  </Database>

  <Database name="jdbc:oracle:thin:@oraserver.dwd.de:1521:DBASE2">
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=DWD"
      userid = "unidart_dwd" password = "*****" />
    <User dn = "/O=Deutscher Wetterdienst/OU=UNIDART/OU=simpleCA-ofl17.dwd.de/OU=dwd.de/CN=FMI"
      userid = "unidart_fmi" password = "*****" />
  </Database>

</DatabaseRoles>
```

## Advantages for a data provider

- provide data together with other data centres increases satisfaction of users
- UNIDART can be used for the implementation of WIS
- connect to other data grids / applications
- participate on the built-up of a service-oriented architecture amongst meteorological centres

Currently there are three UNIDART applications for climate time series and forecasts:

VGISC-Prototype (RA VI) – Weather Data Request Broker  
at <http://vgisc-2.dwd.de/vgisc/>

SIMDAT at

<http://simdat-cn.ecmwf.int:8080/meteo-portal2/home>

WebWerdis at

<http://werdis-cbs.dwd.de/bvbw/bvbwDWD.portal>

## Future of UNIDART:

- o UNIDART-II project ends Dec. 31, 2006
- o **Continuation within EUMETNET:** only if the majority of EUMETNET members decide to use the developed web services
- o **Alternative:** Consortium of data providers decide to use and to develop the UNIDART-SW
- o WS on the future of UNIDART is planned in February 2007 in Langen, Germany
- o UNIDART-SW as data infrastructure for BALTEX observational data?
- o If yes, clear **vote before Feb. 2007** is requested
